Zoho Creator Setup and Platform Exploration

Aim

To create a Zoho Creator account, explore the platform, and understand its features for developing low-code business applications.

Objectives

- To sign up for a Zoho Creator account.
- To explore the user interface and navigation.
- To understand the process of creating applications, forms, reports, and workflows.
- To learn the basic features of the low-code development platform.

Requirements

- Computer or laptop with internet access
- Web browser (Chrome, Firefox, Edge, etc.)
- Valid email address.

Procedure

1. Open a web browser such as Google Chrome, Mozilla Firefox, or Microsoft Edge and navigate to the Zoho Creator website.

- Click **Sign Up** to create a new Zoho account, or select **Sign In** if an account already exists. Complete the registration by entering the required details and verifying the email address if prompted.

- After logging in, access the Zoho Creator dashboard, which serves as the central workspace for creating and managing applications.
- Familiarize yourself with the dashboard by exploring the navigation menu, including options such as **Applications**, **Forms**, **Reports**, **Pages**, **Workflows**, **Settings**, and **Help**.
- Click **Create New Application** and choose either a pre-built template or **Start from Scratch** to create a new application.

- Enter a suitable application name (for example, *Student Management System*) and create the application.
- Add a new form to the application by selecting **Create Form**. Choose a blank form or a template based on the application's requirements.

9. Save the form and preview it to verify that all fields are displayed correctly and accept user input.
10. Enter several sample records through the form to populate the application's database.
11. Create a report to display the stored records. Explore report options such as list view, summary view, filtering, sorting, and searching.
12. Navigate to the **Workflow** section and examine automation features. Create a simple workflow, such as displaying a success message after form submission or sending an email notification when a new record is added.

13. Explore the **Pages** feature to understand how dashboards and custom user interfaces can be designed using various widgets and layouts.
14. Review the application settings, including user permissions, sharing options, themes, and deployment settings to understand how applications can be managed securely.
15. Test the application by adding, editing, searching, and deleting records to ensure that the forms, reports, and workflows function correctly.

Request ID	Asset	Requested By	Department	Issue Category	Issue Description	Priority

16. Save all changes, preview the completed application, and document the observations regarding the platform's features, ease of use, and overall functionality.

Exploring the Platform Architecture and Interface

Develop

- The Develop section is used to create applications using drag-and-drop tools and Deluge scripting.
- Users can build forms, reports, workflows, and pages with minimal coding.
- It enables rapid application development through a low-code environment.

Deploy

- The Deploy section allows applications to be published and shared with users.
- Developers can configure permissions and provide access through web or mobile platforms.
- Applications can be deployed securely for real-time business use.

Manage

- The Manage section helps administrators control users, roles, and permissions.
- It provides options for backups, application settings, integrations, and security.
- It is used to monitor and maintain applications after deployment

Observations

- Zoho Creator provides a user-friendly drag-and-drop interface.
- Applications can be created quickly with minimal coding.
- Forms, reports, dashboards, and workflows are integrated within the platform.
- The platform supports automation, data management, and application deployment.

Result

The Zoho Creator platform was successfully set up and explored. A basic application with forms and reports was created, demonstrating the platform's low-code capabilities for rapid application development. The experiment helped in understanding the core features and workflow of Zoho Creator.
